## Using tips:

1. The "start" button can not be pressed when remote start was adopted, otherwise the fuse will be burnt.
2. Motorcycle is not immobilized by switch of lock after starting by remote controller.
3. The engine can not be started remotely if the brake light was broken. The brake light must be renewed.
4. The device must be earthed while equipped and tested alarm system in the motorcycle.
5. Don't fall remote controller heavy or immerge water, Keep away from high temperature environment.
6. Renew batteries if the distance of remote controller remotely short or indicator light of remote controller will be dark.
